DETAILED ACTION

Double Patenting

(1)

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

(2)

Claims 1-6, 12, 18-23 and 29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 13 of U.S. Patent No. 6,695,940. Although the conflicting claims are not identical, they are not patentably distinct from each other because

U.S. Patent No. 6,695,940 discloses a method of making a tubular reaction chamber of a fuel cell comprising: wrapping a first thin planar green ceramic having a metallization surface around a mandrel to form a first tubular surface; wrapping a thin planar plain green ceramic surface around the mandrel over the first green ceramic to form a second tubular surface; wrapping a third planar green ceramic having a metallization surface around the mandrel to form a third tubular surface; laminating together under pressure the wrappings while still wrapped about the mandrel; and then, in either sequence, both separating the mandrel; and sintering the

Art Unit: 1734

laminated wraps, where the metallization of one is suitable an anode and the metallization of the other is suitably a cathode.

By wrapping first and third green ceramic having metallization for anode and cathode, first and second electrode materials are obviously wrapped around the mandrel, as claimed.

Claim Rejections - 35 USC § 103

(3)

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 10/784,445

Art Unit: 1734

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

(4)

Claims 18-21, 23 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over IBM Technical Disclosure Bulletin "Improved Construction of Bender Element Squeeze Bearings."

IBM Technical Disclosure Bulletin "Improved Construction of Bender Element Squeeze Bearings" discloses a method of making a ceramic tube having electrodes comprising: winding green sheet material on a mandrel to form an underlayer; brushing the underlayer with Mo paste to form a conductive layer to form a cylinder; wrapping a second green sheet tape on the cylinder; firing; and adding metallic paste electrodes on the ceramic tube.

By brushing the underlayer with Mo paste to form a cylinder before wrapping second green sheet tape on the cylinder, a first electrode tube is obviously provided, as claimed.

(5)

Claims 31, 32, 34-36, 38,42 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2-8008 Abstract.

JP 2-8008 Abstract discloses a method of making a ceramic tube for a variety of purposes comprising: winding an inner sheet for sticking prevention, such as sheet of synthetic resin, around a bar (mandrel); winding ceramic sheet material around the inner sheet giving multilayers; winding an outer sheet for sticking prevention around the ceramic material; pressing; removing the bar and inner and outer sheets; and firing. Ceramic tube of differing length, thickness and inside diameter may be obtained.

Page 5

Art Unit: 1734

Burning away the inner and outer sheets of synthetic resin during the firing of the ceramic instead of removing the inner and outer sheets before firing would have been obvious to one as alternative methods of removing the inner and outer sheets from the ceramic. The particular thickness of the ceramic tube, such as claimed in Claim 34 and 35, would have been obvious to one of ordinary skill as dependent on the desired use of the ceramic tube, as JP '008 Abstract discloses that ceramic tube of differing length, thickness and inside diameter may be obtained.

(6)

Claim 33 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2-8008 Abstract as applied to claim 31 above, and further in view of Kendall 5,827,620.

Kendall teaches that a fuel cell is made from a fired ceramic tube by coating the inside and the outside of the tube with material to form anode and cathode electrodes (col. 6, lines 27-44).

It would have been obvious to one of ordinary skill in the art to have been obvious to one of ordinary skill in the art to have modified the method of JP 2-8008 Abstract for making a ceramic tube for a variety of purposes by coating the inside and outside of the fire ceramic tube with material to form electrodes, as taught by Kendall to form a fuel cell by providing a fired ceramic tube with anode and cathode electrodes.

Art Unit: 1734

Allowable Subject Matter

(7)

Claims 7-11, 13-17, 24-28, 30, 37 and 39-41 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

(8)

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(9)

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melvin Curtis Mayes whose telephone number is 571-272-1234. The examiner can normally be reached on Mon-Fri 7:30 AM - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Fiorilla can be reached on 571-272-1187. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
